ABOUT US

Inoris Medical is a Swedish manufacturer and distributor of medical devices. The company founded in 2000 in Malmö, Sweden designs, develops and builds innovative endoscopy accessories. In 2007 a new division of Inoris Medical has launched for Clean Room manufacturing. Most recently, Inoris Medical diversified its products and services creating Medical Packaging division which customized medical supply kits to hospitals, clinics and individual medical practitioners.

To meet constantly evolving requirements of medical market, we use practical suggestions from teams of anesthesiologists, cardiologists, and nurses. Inoris Medical is also a provider of complete assemblies and related plastic injection molded components. The company maintains controlled environment for assembly of medical devices and molding components. The environmental controls are clue for reduction of contaminants.

Inoris Medical is a major distributor of endoscopy accessories for The General Electric Healthcare.

Inoris Medical has GMP 
certified manufacturing plant

ISO 13485 certification 

All products have CE marking 

Some products have 
USFDA registration US

BRAND NEW BITEBLOCKS IN THE RANGE OF INORIS MEDICAL PRODUCTS

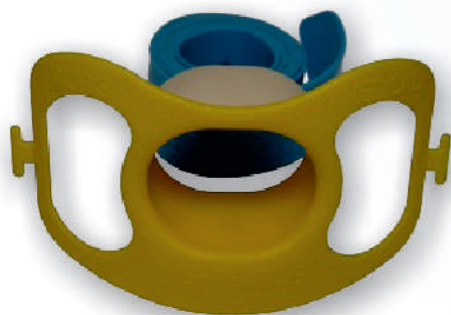

IM-02 BITEGUARD

The white Gastroguard is a semi-hard, 0 formed biteblock made of new, lighter material. Anatomic design guarantees perfect oral matching thus enhancing the comfort for patient during an endoscopic procedure. It has a double protection in the form of rim, blocking it from slipping out of the mouth during the procedure as well as the rubber band which is delicate, adjustable and does not cause discomfort nor pressure on the patient's cheeks and face.

IM-65 ADULT SOFT BITEGUARD

The Adult Soft Biteguard is a non-sterile, disposable mouthpiece designed for adult patients. It is produced from a special latex free mixture of plastics. A bite place is covered with soft plastic. The head strap is also free of latex. Adult Soft Biteguard protects patient from injury and laceration as well as the instrument from being bitten during gastroscopy and transesophageal echocardiography. Adult Biteguard has a flexible frame, is gentle and comfortable on the patient's cheeks and face. There is no dental retention rim while using Adult Soft Biteguard. It has been tested in several hospitals with very good results.

IM-1000 PYLANT MONITOR

The Pylant Monitor is a disposable, single patient use, endotracheal tube (ETT) cuff pressure monitor. ETT cuff monitors are used to indicate the pressure within the ETT cuff to prevent inadvertent over or under inflation of the ETT cuff. The practitioners' or institutional guidelines determine the exact inflation pressure used. Literature on ETT cuff pressures suggests that pressures between 20 cm H₂O and 30 cm H₂O are preferred to prevent under and over inflation. The Pylant Monitor is MRI Compatible.

BITEGUARDS

IM-10 Clip-on Biteguard, white, short wing version

- Biteblock for Adults ■
- Inner diameter Ø 16 mm ■
- Disposable ■
- Latex free ■
- Non-toxic ■
- Non-sterile ■

Clip-on Biteguard is designed to protect patients teeth and the probe shaft during use of transesophageal imaging transducers. The best position for this biteblock is when the outside wings are placed between the lips and patients teeth.

IM-20 Clip-on Biteguard, blue, long wing version

- Biteblock for Adults
- Inner diameter Ø 16 mm
- Disposable
- Latex free
- Non-toxic
- Non-sterile

Clip-on Biteguard is designed to protect patients teeth and the probe shaft during use of transesophageal imaging transducers. It is recommended for use in awake and polyclinic patients. The wings should be placed outside the mouth. The Clip-on Biteguard could also be placed on the endoscope after the instrument is inserted into the mouth.
